## STANDARD CAPACITY REFLOW SYSTEM

Wirestripping and Reflow systems differ from the other styles of resistance soldering systems, as these systems pass a controlled current through a closed-loop resistive material, creating a hot formed wire that can be used to strip insulating jackets off wires (including Teflon and other PTFE-type materials), used as a hot knife to melt and trim plastics and waxes, reflow solder balls, and even perform some wood burning.

### FEATURES AND BENEFITS

**250 Watts of (2.6 VAC) Infinitely Variable Power** permits quick stripping and reflow without excess thermal damage

**Light-weight, palm-sized hand piece** minimizes operator fatigue.

**Footswitch** permits hands-free activation of power, vastly improving control of your applications and virtually eliminating the sparking that is common with other brands of resistance based systems.
